

# AQUATRUCK

## ***"TAMING THE TOUGHEST TWO THIRDS OF THE GLOBE"***

AquaTruck plastic boats have earned a reputation over 20 years as a ***Strong, Stable, Safe & Smooth*** solution across a range of industries, offering a great commercial alternative to traditional construction materials.

Our boats are currently used in fish farming, police work, oil response recovery work, commercial diving, harbour maintenance, research and leisure, with many repeat customers a testament to our quality and performance.

## **Strong**

- ▶ High Density Polyethylene (HDPE) fabrication allows for a strong, durable construction.
- ▶ HDPE fabrication offers a much stiffer product than what can be offered by moulded plastic boat alternatives.
- ▶ High impact resistance of material means less maintenance.
- ▶ With a UV resistance of up to 50 years and non corrosive properties in seawater, AquaTrucks are built to last and will offer an attractive life cycle when compared to other materials.

## **Stable**

- ▶ The pontoon style construction offers a stable platform making AquaTrucks ideal for getting large loads on and off over the side.
- ▶ AquaTrucks have been configured with cranes and even bow doors allowing for a 2500kg vehicle on deck.

## **Safe**

- ▶ With a specific gravity of 0.95 the HDPE material is lighter than water, making these boats hard to sink.
- ▶ Sealed pontoons that are filled with foam offer further peace of mind that your boat will stay on top of the water.
- ▶ Can be configured and certified for commercial operations up to 50 miles offshore.

## **Smooth**

- ▶ The material properties of HDPE combined with good hull design result in a ride quality second to none.
- ▶ These boats are quiet and have a softness that has to be experienced to be believed.
- ▶ With no porosity the HDPE finish is very smooth and doesn't allow penetration from marine organisms, making antifouling unnecessary. Surface growth can be easily removed.
